

HOW MUCH MULCH DO I NEED?

How to read the table

- 1.) Figure the length of the area to cover.
- 2.) Figure the width of the area to cover.
- 3.) Multiply length by width to calculate square footage. (4 ft. x 5 ft. = 20 sq. ft.)
- 4.) Locate the square footage on the chart below. (A)
- 5.) Locate the number in inches you want to fill (depth) across the top of the chart. (B)
(We recommend 2-4 inches for mulching) (12" for Kids Karpet Soft Playground Surfaces)
- 6.) The number in the column represents the number of cubic yards required.

B		A DEPTH IN INCHES					
		2"	3"	4"	6"	8"	12"
50	1/4	1/2	1/2	1	1+	2	
100	1/2	1-	1+	2	2.5	4	
150	1	1 1/2	2	3	4	6	
200	1+	2	2.5	3.5	5	7.5	
250	1.5	2.5	3	4.5	6	9	
300	2	3	3.5	5.5	7.5	11	
350	2+	3.5	4.5	6.5	9	13	
400	2.5	4	5	7.5	10	15	
450	3	4.5	5.5	8.5	11	17	
500	3+	4.5	6	9	12	18.5	
550	3.5	5	7	10	13.5	20	
600	3.5	5.5	7.5	11	15	22	
650	4	6	8	12	16	24	
700	4+	6.5	8.5	13	17	26	
750	4.5	7	9.5	14	18.5	28	
800	5+	7.5	10	15	20	30	
850	5	8	10.5	15.5	21	31	
900	5.5	8.5	11	17	22	33	
950	6	9	12	17.5	23	35	
1000	6	9	12	18.5	25	37	

Example: Area of 50 sq. ft. at 2 in. = 1/4 cu. yd. (27 cu. ft. = 1 cubic yd.)
